Subject: SB 169

Transportation committee members,

It has come to our attention that SB 169 contains language that could be misinterpreted as technology to make it easier for legislators to implement a driver user fee or VMT down the road.

Sec 2B concerning "automated technologies" is of concern to those of us monitoring the advancement of "black box" technologies which would be required to implement any future user fees or additional mileage taxes.

Would the committee consider adding language to the effect of that this is "not part of an autonomous vehicle, that the technology shall not be used for future millage tax or driver user fees"

Thank you for your attention.
